(54) Title: WOUND CLOSURE DEVICE AND METHOD

#### (57) Abstract

An apparatus and method are provided for closing a perforation in a wall of a patient's blood vessel or other organs. The apparatus includes an elongated support member having a distal end supporting one or more tissue engaging hooks configured to engage fibrous vessel tissue when moved in a first direction and to disengage the tissue when moved in a second direction, and a proximal end for applying rotational torque to the support member to cause the hooks to engage collagen fibrous tissue in the adventitia of the blood vessel or fibrous tissue in other body organs. The hooks engaging the collagen fiber causes the blood vessel tissue surrounding the perforation to be drawn into close proximity such that the perforation can be closed. The apparatus is deployed in an outer sheath with the hooks encased until a selected engaging location has been achieved. Puncture closure can be accomplished by various techniques, including stasis, cauterizing, or by clamping.

1

national application No. PCT/US 98/19682

| Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)  |
|--|
| This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:   |
| 1. X Claims Nos.: 9-13 because they relate to subject matter not required to be searched by this Authority, namely:  |
| Rule 39.1(iv) PCT - Method for treatment of the human or animal body by surgery  |
| 2. Claims Nos.: because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:  |
| 3. Claims Nos.:  |
| because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).  |
| Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)  |
| This International Searching Authority found multiple inventions in this international application, as follows:  |
| see additional sheet   |
|  |
| As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.   |
| 2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.  |
| 3. As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:                        |
| 4. No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:  1-6,40-56 |
| Remark on Protest  The additional search fees were accompanied by the applicant's protest.  No protest accompanied the payment of additional search fees.  |

# FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

1. Claims: 1-6,40-56

Closing device allowing manipulation for closure of puncture, in particular with (blood flow) locator or dissolvable connection.

2. Claims: 1,7,8,31-39,57,58

Closing device with heating element for cautery for sealing puncture

3. Claims: 14-30

Closing device with tissue engaging hooks on the outer surface of support member

4. Claims: 59-64

Closing device with elastic ring and hook and pile structure for closing puncture
